DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it contains the word "said" at line 7. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Phelon (3,663,850).

Regarding claim 1, Phelon shows an electric motor (Figures 1-30) including a rotor (15) with a generally cylindrical rotor wall (15a) and a plurality of magnetic field producing elements (12) mounted on an inside surface of the rotor wall, the rotor being mounted for rotation around a central stator (18), wherein the magnetic field producing element are mounted on the rotor wall by means of a plurality of resilient retaining members (13), at least one resilient retaining member being located between and engaging with edges of two adjacent magnetic field producing elements (12), said edges of the magnetic field producing elements extending generally parallel to an axis of rotation the rotor, the resilient retaining member being elastically deformed so as to exert a retaining force on the magnetic field producing elements.

Art Unit: 2834

Regarding claims 2-11, it is noted that Phelon also shows all of the limitations of the claimed invention in Figures 1, 3, 4, 11, 14, 18, and 19.
